Avtec consoles can be interfaced to any manufacturer's trunked radio system using 4-wire audio and PTT via control stations. Thus any manufacturer's subscriber unit (and perhaps some fixed stations) can be interfaced to Avtec consoles with the sole features being transmit and receive on a fixed talkgroup. This approach requires a control station for each talkgroup interfaced.

To learn more about Avtec and our other products, please contact us at: 800-310-7045.
